

PROFESSIONAL WET CLEANING PROCESS

Computer-Controlled Washing

- Microprocessor controls automatic detergent dispensing, drum speed and rotation
- Low water level and temperature
- Water and detergent mixes prior to entering the cleaning drum

Cleaning Agents

- Detergents remove stains/soils
- Conditioners add smoothness & softness
- Sizing adds body and helps with finishing
- Automatic detergent dispensing system connected to washer

Moisture Sensor Dryer

- Precise moisture control
- Detects moisture in garments
- Reverse rotating tumbling
- Automatic shut off at specified residual moisture level

Finishing Tensioning Equipment

- Enhances restoration of constructed garments
- Uses steam to relax fibers and tension to reshape garments
- Uses air to dry
